Cyber Seamanship – Module 1 (DEMO)

DEMO DOCUMENT – replace with EMA's course material.

Why cyber risk matters on board

Ships depend on connected systems: navigation (ECDIS, GNSS, AIS), engine and cargo control, communications and crew devices. A cyber incident can affect safety, the environment and the company.

Everyday good habits

- Never plug unknown USB sticks into ship systems.
- Check the sender before opening attachments or links.
- Use your own account and a strong password; never share it.
- Report anything unusual to the master or the company security officer.
